Perspective Projection

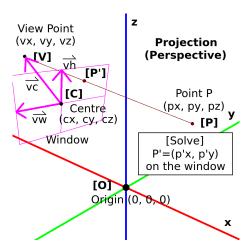

Figure: Projection in Euclidean \mathbb{R}^3 Space

KVD, ADL August 17, 2017 OpenCG³ Spec Version 0.2.7 2

Command Tokens

Regular Expressions

```
\begin{split} \mathbb{N} &\coloneqq \big\{ \; \alpha \mid \alpha \in \texttt{[0-9]+} \, \big\} \\ \mathbb{R} &\coloneqq \big\{ \; \alpha \mid \alpha \in \texttt{[+\-]?([0-9]*[.])?[0-9]+} \big\} \\ \mathbb{S} &\coloneqq \big\{ \; \alpha \mid \alpha \in \texttt{'(.*?)'|[.0-9A-Za-z+\-]+} \big\} \\ \mathbb{W} &\coloneqq \big\{ \; \alpha \mid \alpha \in \texttt{[\t]} \big\} \end{split} \qquad \text{whitespace}
```

Descriptions

- The matching mechanism abides by the maximal munch rule.
- Each command is whitespace-insensitive except being quoted by a pair of single quotation marks (').

Command Grammars

Context-Free Expansions

Descriptions

- Each command starts from C and ends with a ; or an EOL.
- Non-terminal symbol expansions are prior than function expansions except that symbols are used for describing arguments of a command.

KVD, ADL August 17, 2017 OpenCG³ Spec Version 0.2.7

Command Parsing

Escape Sequence

- \x is an escape sequence.
- If x is \, then it is treated as a single backslash.
- If x is EOL which may vary from platforms, then the sequence is omitted.
- Otherwise, the sequence is ignored and triggers a warning by default.

Error Handling

- Physical lines are separated by an EOL.
- Logical lines are separated by either a semicolon or an unescaped EOL.
- If the command cannot be parsed by the grammar, then all the characters on the same logical line will be discarded.

KVD, ADL August 17, 2017 OpenCG³ Spec Version 0.2.7

Class and Object System

Classes

- Classes are split into two categories, top and bottom.
- Top classes are class window, class camera, and data classes.
- Bottom classes are class attrib and class group.
- Data classes are split into primitive classes and compound classes.
- Primitive classes are class point, etc.
- Compound classes are class line, class polygon, etc.

Objects

- An object is instantiated from a class aforementioned.
- An object has an unique name throughout the category of its class.

Relations

• References are bidirectional and can be created or deleted via commands.

KVD, ADL August 17, 2017 OpenCG³ Spec Version 0.2.7 6 /

Create a Window

Command

create window S labelw

(1)

Parametres

• <u>label</u>^w : the object name of the class window

Examples

create window main

KVD. ADL

Delete a Window

Command

delete window S label S string (2)

Parametres

- label^w : the object name of the class window
- string : the text printed right after exiting the session

Examples

```
delete window main
delete window main 'Have a nice day.'
```

KVD. ADL August 17, 2017 OpenCG³ Spec Version 0.2.7

Create a Camera

Command

create camera $\underline{\mathbb{S}}$ <u>label</u>^c $\mathbb{R}:3$) <u>centre</u> $\mathbb{R}:3$ > : 2) <u>plane</u> $\mathbb{R}:3$ > <u>sight</u> (3)

Parametres

- label^c: the object name of the class camera
- centre : the coordinate (c_x, c_y, c_z) of the centre of the viewport
- plane : the horizontal and the vertical vertors $(\vec{v_w}, \vec{v_h})$ of the viewport
- sight : the reverse line of sight $\vec{v_c}$, which is from centre to the camera

Examples

create camera z-top (0 0 1) (<1 0 0> <0 1 0>) <0 0 1>

Attach a Camera

Command

attach camera S label^c S label^w (4)

Parametres

- labelc : the object name of the class camera
- label^w : the object name of the class window

Examples

attach camera z-top main

KVD. ADL

Create Points

Command

```
create point \frac{\mathbb{S} |\text{label}|^p:}{\mathbb{S} |\text{label}|^p: \geqslant n} \frac{\mathbb{R}:3) \text{ coord}}{\mathbb{R}:3) \text{ coord}:n} (5)
create point \frac{\mathbb{S} |\text{label}|^p: \geqslant n}{\mathbb{R}:3) \text{ coord}:n}
```

Parametres

- <u>label</u>^p : the object name of the class point
- coord : the coordinate (p_x, p_y, p_z) of the point

Examples

```
create point 'origin' (0 0 0)
create point {X-1 X-2} (1 0 0)
create point (Y-1 Z-1) ((0 1 0)(0 0 1))
```

Delete Points

Command

```
delete point S | \underline{label^p} : 
                                                                                                    (7)
```

Parametres

 label^p : the object name of the class point

August 17, 2017

Examples

```
delete point origin
delete point {origin 'random-point'}
```

Create Attributes

Command

```
create attrib \frac{\mathbb{S} \text{ desc}^a:}{\mathbb{S} \text{ desc}^a:} \frac{\mathbb{L} \left[ \mathbb{L} \left[ \mathbb{S} \text{ class}^t \mid \mathbb{S} \text{ property } \mathbf{A} \text{ value} \right]:}{\mathbb{S} \text{ desc}^a:} \right] (8) create attrib \frac{\mathbb{S} \text{ desc}^a:}{\mathbb{S} \text{ desc}^a:} \mathbb{E} \left[ \mathbb{L} \left[ \mathbb{S} \mid \mathbb{S}
```

Parametres

- desc^a : the object name of the class attrib
- class^t : the name of one of the top classes
- property : the property of the object of the class
- value : the appropriate value of the property

Examples

```
create attrib (magenta dashed-and-traslucent-green) \
[[point fill-hsv (300 1.0 1.0)] \
  [line style dashed] [line fill-rgba [(0 255 0) .5]]]
```

KVD, ADL August 17, 2017 OpenCG³ Spec Version 0.2.7 13 / 15

Attach Attributes

Command

```
attach attrib \mathbb{S} <u>desc<sup>a</sup></u>: ) \mathbb{S} <u>label<sup>t</sup></u>:
                                                                                                                                                   (10)
attach attrib \mathbb{S} desc<sup>a</sup>: ) \mathbb{S} label<sup>t</sup>:
```

Parametres

- desc^a : the object name of the class attrib
- label^t : the name of the object instantiated from the top classes

Examples

```
attach attrib red
                           point-0
attach attrib (red large) point-1
attach attrib
              blue
                          {point-2 rect-0}
attach attrib (5px black) {point-3 circ-0}
attach attrib (red thick) (point-4 line-0 trianle-0)
```

August 17, 2017 OpenCG³ Spec Version 0.2.7 KVD. ADL

Assign an Operation Name

Command

```
assign opname \underline{\mathbb{S} \text{ action}} \underline{\mathbb{S} \text{ class}} \underline{\mathbb{N} \text{ repeat}} [=\infty] (12)
```

Parametres

- action : the name of the action
- class : the name of one of the classes
- repeat : the amount of the commands emitting operation names

Examples

```
assign instr create point 2
x-axis (1 0 0); y-axis (0 1 0)
// Back To Normal
```
